

Name _____

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

Provide an appropriate response.

1) What is statistics? 1) _____

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

2) Which of the following is not true of statistics? 2) _____
A) Statistics is used to draw conclusions using data.
B) Statistics can be used to organize and analyze information.
C) Statistics involves collecting and summarizing data.
D) Statistics is used to answer questions with 100% certainty.

Determine whether the underlined value is a parameter or a statistic.

3) In a survey conducted in the town of Atherton, 29% of adult respondents reported that they had been involved in at least one car accident in the past ten years. 3) _____
A) parameter B) statistic

4) 25.2% of the mayors of cities in a certain state are from minority groups. 4) _____
A) parameter B) statistic

5) A study of 3100 college students in the city of Pemblington found that 4% had been victims of violent crimes. 5) _____
A) statistic B) parameter

6) 51.3% of the residents of Idlington Garden City are female. 6) _____
A) statistic B) parameter

7) Telephone interviews of 318 employees of a large electronics company found that 45% were dissatisfied with their working conditions. 7) _____
A) parameter B) statistic

8) The average age of the 65 students in Ms. Hope's political science class is 21 years 6 months. 8) _____
A) parameter B) statistic

9) Mark retired from competitive athletics last year. In his career as a sprinter he had competed in the 100-meters event a total of 328 times. His average time for these 328 races was 10.23 seconds. 9) _____
A) parameter B) statistic

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

Provide an appropriate response.

10) A survey of 1144 American households found that 91% of the households own a DVD recorder. Identify the population, the sample, and the individuals in the study. 10) _____

11) A survey of 1365 American households found that 64% of the households own at least two bicycles. Identify the population, the sample, and the individuals in the study. 11) _____

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

- 12) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 300 students and carefully recorded their parking times. Identify the population of interest to the university administration. 12) _____
- A) the entire set of faculty, staff, and students that park at the university
 - B) the parking times of the entire set of students that park at the university
 - C) the students that park at the university between 9 and 10 AM on Wednesdays
 - D) the parking times of the 300 students from whom the data were collected
- 13) A manufacturer of cellular phones has decided that an assembly line is operating satisfactorily if less than 0.03% of the phones produced per day are defective. To check the quality of a day's production, the company decides to randomly sample 10 phones from a day's production to test for defects. Define the population of interest to the manufacturer. 13) _____
- A) the 0.03% of the phones that are defective
 - B) the 10 phones sampled and tested
 - C) the 10 responses: defective or not defective
 - D) all the phones produced during the day in question
- 14) A recent study attempted to estimate the proportion of Florida residents who were willing to spend more tax dollars on protecting the Florida beaches from environmental disasters. Thirty-one hundred Florida residents were surveyed. Which of the following is the population used in the study? 14) _____
- A) all Florida residents
 - B) the Florida residents who were willing to spend more tax dollars on protecting the beaches from environmental disasters
 - C) the 3100 Florida residents surveyed
 - D) all Florida residents who lived along the beaches
- 15) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 210 students and carefully recorded their parking times. Identify the sample of interest to the university administration. 15) _____
- A) type of car (import or domestic)
 - B) location of the parking spot
 - C) parking times of the 210 students
 - D) parking time of a student
- 16) The legal profession conducted a study to determine the percentage of cardiologists who had been sued for malpractice in the last three years. The sample was randomly chosen from a national directory of doctors. Identify the individuals in the study. 16) _____
- A) the doctor's area of expertise (i.e., cardiology, pediatrics, etc.)
 - B) each cardiologist selected from the directory
 - C) the responses: have been sued/have not been sued for malpractice in the last three years
 - D) all cardiologists in the directory

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

- 17) Administrators at a large university want to know the average debt incurred by their graduates. Surveys were mailed to 170 graduating seniors asking them to report their total student loan debt. Identify the population, sample, and individuals in the study. 17) _____

18) A study was conducted to determine if listening to heavy metal music affects critical thinking. To test the claim, 140 subjects were randomly assigned to two groups. Both groups were administered a basic math skills exam. The first group took the exam while heavy metal music was piped into the exam room, while the second group took the exam in a silent room. The mean exam score for the first group was 78, and the mean exam score for the second group was 89. The researchers concluded that heavy metal music negatively affects critical thinking. Identify (a) the research objective, (b) the sample, (c) the descriptive statistics, and (d) the conclusions made in the study. 18) _____

19) A telephone poll asked 1391 registered voters "Would you vote for the current vice president if he ran for president?" Of these 1391 respondents, 36% would vote for the current vice president if he ran for president. The administrators of the study concluded that 36% of all registered voters would vote for the current vice president if he ran for president. Identify (a) the research objective, (b) the sample, (c) the descriptive statistics, and (d) the conclusions made in the study. 19) _____

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

20) Which branch of statistics deals with the organization and summarization of collected information? 20) _____
A) Inferential statistics B) Descriptive statistics
C) Survey design D) Computational statistics

Classify the variable as qualitative or quantitative.

21) the colors of book covers on a bookshelf 21) _____
A) quantitative B) qualitative

22) the number of calls received at a company's help desk 22) _____
A) quantitative B) qualitative

23) the number of seats in a school auditorium 23) _____
A) qualitative B) quantitative

24) the numbers on the shirts of a boy's football team 24) _____
A) quantitative B) qualitative

25) the bank account numbers of the students in a class 25) _____
A) qualitative B) quantitative

26) the weights of cases loaded onto an airport conveyor belt 26) _____
A) qualitative B) quantitative

27) the temperatures of cups of coffee served at a restaurant 27) _____
A) qualitative B) quantitative

28) the native languages of students in an English class 28) _____
A) qualitative B) quantitative

Solve the problem.

- 29) A bicycle manufacturer produces four different bicycle models. Information is summarized in the table below: 29) _____

Model	Series Number	Weight	Style
Ascension	A120	32	Mountain
Road Runner	B640	21	Road
All Terrain	C300	27	Hybrid
Class Above	D90	15	Racing

Identify the variables and determine whether each variable is quantitative or qualitative.

- A) series number: quantitative; weight: quantitative; style: qualitative
B) series number: quantitative; weight: qualitative; style: qualitative
C) series number: qualitative; weight: qualitative; style: qualitative
D) series number: qualitative; weight: quantitative; style: qualitative
- 30) An international relations professor is supervising four master's students. Information about the students is summarized in the table. 30) _____

Student Name	Student Number	Area of Interest	GPA
Anna	914589205	Africa	3.73
Pierre	981672635	Middle East	3.31
Juan	906539012	Latin America	3.34
Yoko	977530271	Asia	3.80

Identify the variables and determine whether each variable is quantitative or qualitative.

- A) student number: quantitative; area of interest: qualitative; GPA: quantitative
B) student number: qualitative; area of interest: qualitative; GPA: quantitative
C) student number: quantitative; area of interest: qualitative; GPA: qualitative
D) student number: qualitative; area of interest: qualitative; GPA: qualitative

Provide an appropriate response.

- 31) Quantitative variables classify individuals in a sample according to 31) _____
A) exhibited trait. B) physical attribute.
C) numerical measure. D) personality characteristic.

Determine whether the quantitative variable is discrete or continuous.

- 32) the number of bottles of juice sold in a cafeteria during lunch 32) _____
A) discrete B) continuous
- 33) the weight of a player on the wrestling team 33) _____
A) discrete B) continuous
- 34) the cholesterol levels of a group of adults the day after Thanksgiving 34) _____
A) continuous B) discrete
- 35) the low temperature in degrees Fahrenheit on January 1st in Cheyenne, Wyoming 35) _____
A) continuous B) discrete
- 36) the number of goals scored in a hockey game 36) _____
A) continuous B) discrete

- 37) the speed of a car on a Boston tollway during rush hour traffic 37) _____
 A) discrete B) continuous
- 38) the number of phone calls to the police department on any given day 38) _____
 A) continuous B) discrete
- 39) the age of the oldest employee in the data processing department 39) _____
 A) continuous B) discrete
- 40) the number of pills in an aspirin bottle 40) _____
 A) continuous B) discrete

Provide an appropriate response.

- 41) The peak shopping time at a pet store is between 8-11:00 am on Saturday mornings. Management at the pet store randomly selected 95 customers last Saturday morning and decided to observe their shopping habits. They recorded the number of items that a sample of the customers purchased as well as the total time the customers spent in the store. Identify the types of variables recorded by the pet store. 41) _____
 A) number of items - discrete; total time - continuous
 B) number of items - discrete; total time - discrete
 C) number of items - continuous; total time - continuous
 D) number of items - continuous; total time - discrete
- 42) The number of violent crimes committed in a city on a given day in a random sample of 100 days is a _____ random variable. 42) _____
 A) discrete B) continuous
- 43) Classify the following random variable: telephone area codes 43) _____
 A) experimental data B) qualitative data
 C) quantitative continuous data D) quantitative discrete data
- 44) A student is asked to rate a guest speaker's ability to communicate on a scale of poor-average-good-excellent. The student is to fill in a corresponding circle on a bubble form. This is an example of collecting what type of data? 44) _____
 A) discrete B) insightful C) continuous D) qualitative

Determine the level of measurement of the variable.

- 45) the musical instrument played by a music student 45) _____
 A) ratio B) ordinal C) nominal D) interval
- 46) the medal received (gold, silver, bronze) by an Olympic gymnast 46) _____
 A) nominal B) interval C) ordinal D) ratio
- 47) height of a tree 47) _____
 A) interval B) ordinal C) nominal D) ratio
- 48) the native language of a tourist 48) _____
 A) interval B) nominal C) ratio D) ordinal

- 49) the day of the month
 A) nominal B) ratio C) ordinal D) interval 49) _____
- 50) an officer's rank in the military
 A) ordinal B) nominal C) interval D) ratio 50) _____
- 51) weight of rice bought by a customer
 A) interval B) ordinal C) ratio D) nominal 51) _____
- 52) a student's favorite sport
 A) ordinal B) nominal C) interval D) ratio 52) _____
- 53) ranking (first place, second place, etc.) of contestants in a singing competition
 A) nominal B) ordinal C) interval D) ratio 53) _____
- 54) capacity of a backpack
 A) interval B) ratio C) nominal D) ordinal 54) _____
- 55) an evaluation received by a physics student (excellent, good, satisfactory, or poor).
 A) ordinal B) nominal C) ratio D) interval 55) _____
- 56) the year of manufacture of a car
 A) ordinal B) nominal C) ratio D) interval 56) _____
- 57) time spent playing basketball
 A) interval B) nominal C) ordinal D) ratio 57) _____
- 58) category of storm (gale, hurricane, etc.)
 A) interval B) ordinal C) nominal D) ratio 58) _____

Determine whether the study depicts an observational study or an experiment.

- 59) A medical researcher obtains a sample of adults suffering from diabetes. She randomly assigns 73 people to a treatment group and 73 to a placebo group. The treatment group receives a medication over a period of three months and the placebo group receives a placebo over the same time frame. At the end of three months the patients' symptoms are evaluated.
 A) experiment B) observational study 59) _____
- 60) A poll is conducted in which professional musicians are asked their ages.
 A) observational study B) experiment 60) _____
- 61) A pollster obtains a sample of students and asks them how they will vote on an upcoming referendum.
 A) experiment B) observational study 61) _____
- 62) The personnel director at a large company would like to determine whether the company cafeteria is widely used by employees. She calls each employee and asks them whether they usually bring their own lunch, eat at the company cafeteria, or go out for lunch.
 A) experiment B) observational study 62) _____

63) A scientist was studying the effects of a new fertilizer on crop yield. She randomly assigned half of the plots on a farm to group one and the remaining plots to group two. On the plots in group one, the new fertilizer was used for a year. On the plots in group two, the old fertilizer was used. At the end of the year the average crop yield for the plots in group one was compared with the average crop yield for the plots in group two. 63) _____
A) observational study B) experiment

64) A researcher obtained a random sample of 100 smokers and a random sample of 100 nonsmokers. After interviewing all 200 participants in the study, the researcher compared the rate of depression among the smokers with the rate of depression among nonsmokers. 64) _____
A) observational study B) experiment

Provide an appropriate response.

65) True or False: Observational studies are not as useful as experiments to learn about the characteristics of a population. 65) _____
A) True B) False

66) True or False: Experiments assist the researcher in isolating the causes of the relationships that exist between two variables. 66) _____
A) True B) False

Determine what type of observational study is described. Explain.

67) Researchers wanted to determine whether there was an association between high blood pressure and the suppression of emotions. The researchers looked at 1800 adults enrolled in a Health Initiative Observational Study. Each person was interviewed and asked about their response to emotions. In particular they were asked whether their tendency was to express or to hold in anger and other emotions. The degree of suppression of emotions was rated on a scale of 1 to 10. Each person's blood pressure was also measured. The researchers analyzed the results to determine whether there was an association between high blood pressure and the suppression of emotions. 67) _____
A) retrospective; Individuals are asked to look back in time.
B) cohort; Individuals are observed over a long period of time.
C) cross-sectional; Information is collected at a specific point in time.

68) Researchers wanted to determine whether there was an association between city driving and stomach ulcers. They selected a sample of 900 young adults and followed them for a twenty-year period. At the start of the study none of the participants was suffering from a stomach ulcer. Each person kept track of the number of hours per week they spent driving in city traffic. At the end of the study each participant underwent tests to determine whether they were suffering from a stomach ulcer. The researchers analyzed the results to determine whether there was an association between city driving and stomach ulcers. 68) _____
A) retrospective; Individuals are asked to look back in time.
B) cross-sectional; Information is collected at a specific point in time.
C) cohort; Individuals are observed over a long period of time.

69) A researcher wanted to determine whether women with children are more likely to develop anxiety disorders than women without children. She selected a sample of 900 twenty-year old women and followed them for a twenty-year period. At the start of the study, none of the women had children. By the end of the study 53% of the women had at least one child. The level of anxiety of each participant was evaluated at the beginning and at the end of the study and the increase (or decrease) in anxiety was recorded. The researchers analyzed the results to determine whether there was an association between anxiety and having children. 69) _____

A) retrospective; Individuals are asked to look back in time.
B) cohort; Individuals are observed over a long period of time.
C) cross-sectional; Information is collected at a specific point in time.

70) Vitamin D is important for the metabolism of calcium and exposure to sunshine is an important source of vitamin D. A researcher wanted to determine whether osteoporosis was associated with a lack of exposure to sunshine. He selected a sample of 250 women with osteoporosis and an equal number of women without osteoporosis. The two groups were matched - in other words they were similar in terms of age, diet, occupation, and exercise levels. Histories on exposure to sunshine over the previous twenty years were obtained for all women. The total number of hours that each woman had been exposed to sunshine in the previous twenty years was estimated. The amount of exposure to sunshine was compared for the two groups. 70) _____

A) cross-sectional; Information is collected at a specific point in time.
B) cohort; Individuals are observed over a long period of time.
C) retrospective; Individuals are asked to look back in time

71) Can money buy happiness? A researcher wanted to determine whether there was any association between economic status and happiness. She selected a sample of 1000 adults and interviewed them. Each person was asked about their financial situation and their level of happiness was evaluated. The researcher analyzed the results to determine whether there was an association between economic status and happiness. 71) _____

A) cross-sectional; Information is collected at a specific point in time.
B) retrospective; Individuals are asked to look back in time.
C) cohort; Individuals are observed over a long period of time.

72) A researcher wanted to determine whether colon cancer was associated with eating meat. He selected a sample of 500 men with colon cancer and an equal number of men without colon cancer. The two groups were matched - in other words they were similar in terms of age, occupation, income, and exercise levels. Histories on the amount of meat consumed over the previous twenty years were obtained for all men. The total amount of meat that each man eaten in the previous twenty years was estimated. The meat consumption was compared for the two groups. 72) _____

A) cross-sectional; Information is collected at a specific point in time.
B) cohort; Individuals are observed over a long period of time.
C) retrospective; Individuals are asked to look back in time

Provide an appropriate response.

73) The government of a town needs to determine if the city's residents will support the construction of a new town hall. The government decides to conduct a survey of a sample of the city's residents. Which one of the following procedures would be most appropriate for obtaining a sample of the town's residents? 73) _____

A) Survey a random sample of employees at the old city hall.
B) Survey the first 500 people listed in the town's telephone directory.
C) Survey a random sample of persons within each geographic region of the city.
D) Survey every 7th person who walks into city hall on a given day.

- 74) The city council of a small town needs to determine if the town's residents will support the building of a new library. The council decides to conduct a survey of a sample of the town's residents. Which one of the following procedures would be most appropriate for obtaining a sample of the town's residents? 74) _____
- A) Survey every 13th person who enters the old library on a given day.
 - B) Survey 300 individuals who are randomly selected from a list of all people living in the state in which the town is located.
 - C) Survey a random sample of librarians who live in the town.
 - D) Survey a random sample of persons within each neighborhood of the town.
- 75) The policy committee at State University has 6 members: Dr. Hernandez, LaToyna, Ming, Jose, John, and Prof. Rise. A subcommittee of two members must be formed to investigate the visitation policy in the dormitories. List all possible simple random samples of size 2. 75) _____
- A) Dr. Hernandez and LaToyna, Dr. Hernandez and Ming, Dr. Hernandez and Jose, Dr. Hernandez and John, Dr. Hernandez and Prof. Rise
 - B) Dr. Hernandez and LaToyna, Ming and Jose, John and Prof. Rise
 - C) Dr. Hernandez and LaToyna, Dr. Hernandez and Ming, Dr. Hernandez and Jose, Dr. Hernandez and John, Dr. Hernandez and Prof. Rise, LaToyna and Ming, LaToyna and Jose, LaToyna and John, LaToyna and Prof. Rise, Ming and Jose, Ming and John, Ming and Prof. Rise, Jose and John, Jose and Prof. Rise, John and Prof. Rise
 - D) Dr. Hernandez and LaToyna, LaToyna and Ming, Ming and Jose, Jose and John, John and Prof. Rise

76) Select a random sample of five state capitals from the list below using the two digit list of random numbers provided. Begin with the uppermost left random number and proceed down each column. When a column is complete, use the numbers at the top of the next right column and proceed down that column.

76) _____

State Capitals

1	Albany, NY	11	Charleston, WV	21	Hartford, CT	31	Madison, WI	41	Richmond, VA
2	Annapolis, MD	12	Cheyenne, WY	22	Helena, MT	32	Montgomery, AL	42	Sacramento, CA
3	Atlanta, GA	13	Columbia, SC	23	Honolulu, HI	33	Montpelier, VT	43	Salem, OR
4	Augusta, ME	14	Columbus, OH	24	Indianapolis, IN	34	Nashville, TN	44	Salt Lake City, UT
5	Austin, TX	15	Concord, NH	25	Jackson, MS	35	Oklahoma City, OK	45	Santa Fe, NM
6	Baton Rouge, LA	16	Denver, CO	26	Jefferson City, MO	36	Olympia, WA	46	Springfield, IL
7	Bismarck, ND	17	Des Moines, IA	27	Juneau, AK	37	Phoenix, AZ	47	St. Paul, MN
8	Boise, ID	18	Dover, DE	28	Lansing, MI	38	Pierre, SD	48	Tallahassee, FL
9	Boston, MA	19	Frankfort, KY	29	Lincoln, NE	39	Providence, RI	49	Topeka KS
10	Carson City, NV	20	Harrisburg, PA	30	Little Rock, AR	40	Raleigh, NC	50	Trenton, NJ

Random Numbers

46	81	17	60	92	59	40	9
53	78	45	14	53	78	8	43
3	99	46	86	41	42	36	95
39	14	16	59	84	18	5	48
45	41	77	91	11	43	76	28

A) Boston, MA; Concord, NH; Dover DE; Santa Fe, NM; Richmond, VA.

B) Springfield, IL; Des Moines, IA; Boston, MA; Santa Fe, NM; Columbus OH.

C) Carson City NV; Boise ID; Atlanta, GA; Cheyenne, WY; Boston, MA.

D) Springfield, IL; Atlanta, GA; Providence, RI; Santa Fe, NM; Columbus OH.

77) The top 38 cities in Wisconsin as determined by population are given below. Select a random sample of four cities from the list below using the two digit list of random numbers provided. Begin with the uppermost left random number and proceed down each column. When a column is complete, use the numbers at the top of the next right column and proceed down that column. Information was obtained from the web site <http://www.citypopulation.de/USA-Wisconsin.html>.

77) _____

Wisconsin Cities by Population

1	Milwaukee	9	Eau Claire	17	New Berlin	25	West Bend	33	Watertown
2	Madison	10	Janesville	18	Wausau	26	Superior	34	Muskego
3	Green Bay	11	West Allis	19	Greenfield	27	Mount Pleasant	35	De Pere
4	Kenosha	12	La Crosse	20	Beloit	28	Neenah	36	Fitchburg
5	Racine	13	Sheboygan	21	Manitowoc	29	Stevens Point	37	South Milwaukee
6	Appleton	14	Wauwatosa	22	Menomonee Falls	30	Caledonia	38	Grand Chute
7	Waukesha	15	Fond du Lac	23	Franklin	31	Sun Prairie		
8	Oshkosh	16	Brookfield	24	Oak Creek	32	Mequon		

Random Numbers

21	49	6	6	19	15	11	17
12	43	4	31	7	18	1	43
23	30	2	24	21	18	6	48
44	12	20	32	2	28	12	38
8	30	38	43	41	29	3	13

- A) Milwaukee, Madison, Green Bay, Kenosha.
- B) Manitowoc, La Crosse, Franklin, Oshkosh.
- C) Manitowoc, Appleton, Greenfield, Fond du Lac.
- D) Milwaukee, Eau Claire, New Berlin, West Bend.

Identify the type of sampling used.

78) Thirty-five math majors, 56 music majors and 26 history majors are randomly selected from 403 math majors, 315 music majors and 512 history majors at the state university. What sampling technique is used?

78) _____

- A) cluster
- B) convenience
- C) stratified
- D) systematic
- E) simple random

79) Every fifth adult entering an airport is checked for extra security screening. What sampling technique is used?

79) _____

- A) convenience
- B) stratified
- C) simple random
- D) systematic
- E) cluster

80) At a local technical school, five auto repair classes are randomly selected and all of the students from each class are interviewed. What sampling technique is used?

80) _____

- A) systematic
- B) convenience
- C) cluster
- D) simple random
- E) stratified

- 81) A writer for an art magazine randomly selects and interviews fifty male and fifty female artists. What sampling technique is used? 81) _____
- A) convenience
 - B) stratified
 - C) simple random
 - D) systematic
 - E) cluster
- 82) A travel industry researcher interviews all of the passengers on five randomly selected cruises. What sampling technique is used? 82) _____
- A) convenience
 - B) simple random
 - C) stratified
 - D) cluster
 - E) systematic
- 83) A statistics student interviews everyone in his apartment building to determine who owns a cell phone. What sampling technique is used? 83) _____
- A) cluster
 - B) simple random
 - C) stratified
 - D) systematic
 - E) convenience
- 84) A lobbyist for the oil industry assigns a number to each senator and then uses a computer to randomly generate ten numbers. The lobbyist contacts the senators corresponding to these numbers. What sampling technique was used? 84) _____
- A) stratified
 - B) convenience
 - C) cluster
 - D) systematic
 - E) simple random
- 85) Based on 9500 responses from 29,000 questionnaires sent to all its members, a major medical association estimated that the annual salary of its members was \$98,500 per year. What sampling technique was used? 85) _____
- A) convenience
 - B) cluster
 - C) systematic
 - D) simple random
 - E) stratified
- 86) In a recent online survey, participants were asked to answer "yes" or "no" to the question "Are you in favor of stricter gun control?" 6571 responded "yes" while 4537 responded "no". There was a fifty-cent charge for the call. What sampling technique was used? 86) _____
- A) systematic
 - B) simple random
 - C) cluster
 - D) convenience
 - E) stratified

- 87) A sample consists of every 20th worker from a group of 5000 workers. What sampling technique was used? 87) _____
A) systematic
B) convenience
C) cluster
D) stratified
E) simple random
- 88) A market researcher randomly selects 100 homeowners under 55 years of age and 100 homeowners over 55 years of age. What sampling technique was used? 88) _____
A) simple random
B) systematic
C) stratified
D) convenience
E) cluster
- 89) To avoid working late, the plant foreman inspects the first 20 microwaves produced that day. What sampling technique was used? 89) _____
A) systematic
B) cluster
C) stratified
D) convenience
E) simple random
- 90) The names of 40 employees are written on 40 cards. The cards are placed in a bag, and three names are picked from the bag. What sampling technique was used? 90) _____
A) simple random
B) convenience
C) stratified
D) systematic
E) cluster
- 91) An education researcher randomly selects 30 of the nation's junior colleges and interviews all of the professors at each school. What sampling technique was used? 91) _____
A) convenience
B) simple random
C) stratified
D) cluster
E) systematic

Provide an appropriate response.

- 92) The United States can be divided into four geographical regions: Northeast, South, Midwest, and West. The Northeast region consists of 9 states; the South region consists of 16 states; the Midwest consists of 12 states; and the West consists of 13 states. If a survey is to be administered to the governors of 10 of the states and we want equal representation for the states in each of the four regions, how many states from the South should be selected? Round to the nearest whole state. 92) _____
A) 4 B) 5 C) 2 D) 3

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

- 103) Which of the following is not true about factors? 103) _____
A) One way to control factors is to fix their level at one predetermined value throughout the experiment.
B) Any combination of the values of the factors is called a treatment.
C) Factors whose effect on the response variable interests us should be set at predetermined levels.
D) Factors whose effect on the response variable is not of interest can be set after the experiment.
- 104) The variable measured in the experiment is called _____. 104) _____
A) a sampling unit B) the predictor variable
C) the treatment D) the response variable
- 105) The object upon which the response variable is measured is called _____. 105) _____
A) the predictor variable B) a treatment
C) the factor D) an experimental unit
- 106) _____ is a condition applied to the experimental units involved in an experiment. 106) _____
A) The sampling design B) A treatment
C) The factor level D) The design
- 107) An experiment in which the experimental unit (or subject) does not know which treatment he or she is receiving is called a _____. 107) _____
A) randomized block design B) matched-pairs design
C) single-blind experiment D) double-blind experiment
- 108) An experiment in which neither the experimental unit nor the researcher in contact with the experimental unit knows which treatment the experimental unit is receiving is called a _____. 108) _____
A) matched-pairs design B) randomized block design
C) double-blind experiment D) single-blind experiment
- 109) A salesman boasts to a farmer that his new fertilizer will increase the yield of the farmer's crops by 15%. The farmer wishes to test the effects of the new fertilizer on her corn yield. She has four equal sized plots of land—one with sandy soil, one with rocky soil, one with clay-rich soil, and one with average soil. She divides each of the four plots into three equal sized portions and randomly labels them A, B and C. The four A portions are treated with her old fertilizer. The four B portions are treated with the new fertilizer. The four C portions receive no fertilizer. At harvest time, the corn yield is recorded for each section of land. What is the claim she is testing? 109) _____
A) The total yield increased at least 15%.
B) The new fertilizer yielded at least a 15% improvement.
C) The A sections had at least a 15% increase in yield.
D) The average soil field had at least a 15% increase in yield.
- 110) What will help insure that the effect of a treatment is not due to some characteristic of a single experimental unit? 110) _____
A) blinding B) replication C) randomizing D) blocking

- 111) A drug company wanted to test a new indigestion medication. The researchers found 600 adults aged 25-35 and randomly assigned them to two groups. The first group received the new drug, while the second received a placebo. After one month of treatment, the percentage of each group whose indigestion symptoms decreased was recorded and compared. What is the response variable in this experiment? 111) _____
- A) the type of drug (medication or placebo)
 - B) the percentage who had decreased indigestion symptoms
 - C) the 600 adults aged 25-35
 - D) the one month treatment time
- 112) A drug company wanted to test a new indigestion medication. The researchers found 400 adults aged 25-35 and randomly assigned them to two groups. The first group received the new drug, while the second received a placebo. After one month of treatment, the percentage of each group whose indigestion symptoms decreased was recorded and compared. What is the treatment in this experiment? 112) _____
- A) the one month treatment time
 - B) the drug
 - C) the percentage who had decreased indigestion symptoms
 - D) the 400 adults aged 25-35
- 113) A drug company wanted to test a new acne medication. The researchers found 600 adults aged 25-35 and randomly assigned them to two groups. The first group received the new drug, while the second received a placebo. After one month of treatment, the percentage of each group whose acne symptoms decreased was recorded and compared. How many levels does the treatment in this experiment have? 113) _____
- A) 600 (number of respondents)
 - B) 1 (months of treatment)
 - C) 10 (age span of respondents)
 - D) 2 (medication or placebo)
- 114) A drug company wanted to test a new depression medication. The researchers found 400 adults aged 25-35 and randomly assigned them to two groups. The first group received the new drug, while the second received a placebo. After one month of treatment, the percentage of each group whose depression symptoms decreased was recorded and compared. What type of experimental design is this? 114) _____
- A) single-blind design
 - B) completely randomized design
 - C) matched-pairs design
 - D) randomized block design
- 115) A drug company wanted to test a new acne medication. The researchers found 400 adults aged 25-35 and randomly assigned them to two groups. The first group received the new drug, while the second received a placebo. After one month of treatment, the percentage of each group whose acne symptoms decreased was recorded and compared. Identify the experimental units. 115) _____
- A) the percentage who had decreased acne symptoms
 - B) the one month treatment time
 - C) the 400 adults aged 25-35
 - D) the drug (medication or placebo)

- 116) A medical journal published the results of an experiment on anxiety. The experiment investigated the effects of a controversial new therapy for anxiety. Researchers measured the anxiety levels of 31 adult women who suffer moderate conditions of the disorder. After the therapy, the researchers again measured the women's anxiety levels. The differences between the the pre- and post-therapy anxiety levels were reported. What is the response variable in this experiment? 116) _____
- A) the disorder (anxiety or no anxiety)
 - B) the differences between the the pre- and post-therapy anxiety levels
 - C) the 31 adult women who suffer from anxiety
 - D) the therapy
- 117) A medical journal published the results of an experiment on insomnia. The experiment investigated the effects of a controversial new therapy for insomnia. Researchers measured the insomnia levels of 33 adult women who suffer moderate conditions of the disorder. After the therapy, the researchers again measured the women's insomnia levels. The differences between the the pre- and post-therapy insomnia levels were reported. What is the treatment in this experiment? 117) _____
- A) the therapy
 - B) the 33 adult women who suffer from insomnia
 - C) the differences between the the pre- and post-therapy insomnia levels
 - D) the disorder (insomnia or no insomnia)
- 118) A medical journal published the results of an experiment on depression. The experiment investigated the effects of a controversial new therapy for depression. Researchers measured the depression levels of 79 adult women who suffer moderate conditions of the disorder. After the therapy, the researchers again measured the women's depression levels. The differences between the the pre- and post-therapy depression levels were reported. How many levels does the treatment have in this experiment? 118) _____
- A) 1 (therapy)
 - B) 158 (the adult women who suffer from depression measured pre- and post-therapy)
 - C) 79 (the adult women who suffer from depression)
 - D) 2 (pre- and post-therapy)
- 119) A medical journal published the results of an experiment on anorexia. The experiment investigated the effects of a controversial new therapy for anorexia. Researchers measured the anorexia levels of 84 adult women who suffer moderate conditions of the disorder. After the therapy, the researchers again measured the women's anorexia levels. The differences between the the pre- and post-therapy anorexia levels were reported. What type of experimental design is this? 119) _____
- A) completely randomized design
 - B) single-blind design
 - C) matched-pairs design
 - D) randomized block design
- 120) A medical journal published the results of an experiment on anorexia. The experiment investigated the effects of a controversial new therapy for anorexia. Researchers measured the anorexia levels of 79 adult women who suffer moderate conditions of the disorder. After the therapy, the researchers again measured the women's anorexia levels. The differences between the the pre- and post-therapy anorexia levels were reported. Identify the experimental units. 120) _____
- A) the differences between the pre- and post-therapy anorexia levels
 - B) the 79 adult women who suffer from anorexia
 - C) the therapy time period (pre or post)
 - D) the disorder (anorexia or no anorexia)

- 121) A farmer wishes to test the effects of a new fertilizer on her soybean yield. She has four equal-sized plots of land-- one with sandy soil, one with rocky soil, one with clay-rich soil, and one with average soil. She divides each of the four plots into three equal-sized portions and randomly labels them A, B, and C. The four A portions of land are treated with her old fertilizer. The four B portions are treated with the new fertilizer, and the four C's are treated with no fertilizer. At harvest time, the soybean yield is recorded for each section of land. What is the response variable in this experiment? 121) _____
- A) the soybean yield recorded for each section of land
 - B) the four types of soil
 - C) the section of land (A, B, or C)
 - D) the type of fertilizer (old, new, or none)
- 122) A farmer wishes to test the effects of a new fertilizer on her soybean yield. She has four equal-sized plots of land-- one with sandy soil, one with rocky soil, one with clay-rich soil, and one with average soil. She divides each of the four plots into three equal-sized portions and randomly labels them A, B, and C. The four A portions of land are treated with her old fertilizer. The four B portions are treated with the new fertilizer, and the four C's are treated with no fertilizer. At harvest time, the soybean yield is recorded for each section of land. What is the treatment in this experiment? 122) _____
- A) the fertilizers
 - B) the section of land (A, B, or C)
 - C) the four types of soil
 - D) the soybean yield recorded for each section of land
- 123) A farmer wishes to test the effects of a new fertilizer on her wheat yield. She has four equal-sized plots of land-- one with sandy soil, one with rocky soil, one with clay-rich soil, and one with average soil. She divides each of the four plots into three equal-sized portions and randomly labels them A, B, and C. The four A portions of land are treated with her old fertilizer. The four B portions are treated with the new fertilizer, and the four C's are treated with no fertilizer. At harvest time, the wheat yield is recorded for each section of land. How many levels does the treatment have in this experiment? 123) _____
- A) 12 (sections of land)
 - B) 3 (old, new, or no fertilizer)
 - C) 1 (wheat yield)
 - D) 4 (rocky, sandy, clay, or average soil)
- 124) A farmer wishes to test the effects of a new fertilizer on her potato yield. She has four equal-sized plots of land-- one with sandy soil, one with rocky soil, one with clay-rich soil, and one with average soil. She divides each of the four plots into three equal-sized portions and randomly labels them A, B, and C. The four A portions of land are treated with her old fertilizer. The four B portions are treated with the new fertilizer, and the four C's are treated with no fertilizer. At harvest time, the potato yield is recorded for each section of land. What type of experimental design is this? 124) _____
- A) randomized block design
 - B) double-blind design
 - C) completely randomized design
 - D) matched-pairs design

- 125) A farmer wishes to test the effects of a new fertilizer on her wheat yield. She has four equal-sized plots of land-- one with sandy soil, one with rocky soil, one with clay-rich soil, and one with average soil. She divides each of the four plots into three equal-sized portions and randomly labels them A, B, and C. The four A portions of land are treated with her old fertilizer. The four B portions are treated with the new fertilizer, and the four C's are treated with no fertilizer. At harvest time, the wheat yield is recorded for each section of land. Identify the experimental units. 125) _____
- A) the four types of soil
 - B) the three types of fertilizer
 - C) the wheat yield at harvest time
 - D) the wheat plants on the various plots of land
- 126) When the effects of the explanatory variable upon the response variable cannot be determined, then 126) _____
- A) there is sampling error.
 - B) the claim is invalid.
 - C) confounding has occurred.
 - D) a lurking variable is present.

- 1) Statistics is the science of collecting, summarizing, organizing, and analyzing information in order to answer questions or draw conclusions.
- 2) D
- 3) B
- 4) A
- 5) A
- 6) B
- 7) B
- 8) A
- 9) A
- 10) population: collection of all American households; sample: collection of 1144 American households surveyed; individuals: each household
- 11) population: collection of all American households; sample: collection of 1365 American households surveyed; individuals: each household
- 12) B
- 13) D
- 14) A
- 15) C
- 16) B
- 17) The population of interest is the student loan debt incurred by all graduates of the university. The sample is student loan debt of the 170 graduating seniors that were collected by the university administrators. The individuals are each graduating senior whose student loan debt was recorded.
- 18) (a) if listening to heavy metal music affects critical thinking
(b) the 140 subjects
(c) the mean exam score for the first group = 78, and the mean exam score for the second group was 89
(d) that heavy metal music negatively affects critical thinking
- 19) (a) to determine the percentage of registered voters who would vote for the current vice president if he ran for president
(b) the 1391 registered voters surveyed
(c) 36% of the respondents supported reelection
(d) that 36% of all registered voters would vote for the current vice president if he ran for president
